Technology and system information

Reflection for Assignment 3

Name: Hamdan Saleh Omar AL-Mohamadi

Matric Number: A22EC4027

Lecturer:

Dr.Azura A Samah

Reflection:

The industry conference gave us an insight into the world of systems development, explaining how it involves creating, testing and deploying new software.

One notable company in this space is Credence, which focuses on analytics and cloud services.

Their teams, including roles such as business analysts, data architects, scientists, and developers, work closely together to deliver the right solutions.

What caught my attention about Credence was the emphasis on teamwork and cooperation.

They value open communication, continuous learning, and growth opportunities, creating an environment that encourages empowerment and independence.

They also take time to celebrate important achievements and milestones.

Prestige is more than just words; they use interesting technologies and tools in their system development work.

They use databases and online analytical processing (OLAP) to improve their capabilities.

When dealing with clients on tight budgets, they rely on visualization tools like Metabase and Superset.

They also use Airflow to streamline the data collection and transformation process.

In summary, the industry conference not only demonstrated Credence's commitment to providing the best solutions but also emphasized the importance of a collaborative team culture and staying at the forefront of technology in the developing world system.

Thank you!
